Bicycle Riding Tips

- Always ride with traffic**  
Motorists are not looking for bicyclists riding on the wrong side of the street. Ride with traffic to avoid potential accidents.
- Do not swerve between parked cars**  
Motorists may not see you when you re-enter the traffic flow. Ride in the middle of the lane if traffic is moving slowly.
- At busy intersections**  
At busy intersections and if you are going as fast as traffic, ride away from the edge of the lane.
- Follow road markings**  
Do not turn left from a right-turn lane, or go straight from a turn lane.
- Choose the best method of turning left**  
Either turn like an automobile (from the turn lane), or get off the bike and walk in the crosswalks (like a pedestrian).
- Do not pass on the right**  
Motorists may not see you to their right as you pass them. Instead, ride behind a car when you think it may be turning right.
- Watch for cars pulling out and opening of door(s)**  
Make eye contact with drivers. Assume they do not see you until you are sure that they do.
- Avoid road hazards**  
Watch for railroad tracks, storm drains, holes, oil, sand, gravel, and other hazards. Anticipate moving around hazards so that you can avoid conflicts with cars.
- Keep your bike in good condition**  
Check the brakes and tires regularly. Use bells to alert traffic, and a rack or basket for carrying things.
- Wear a helmet**  
Helmets reduce head injuries. Wear a helmet even on short trips.
- Use lights at night**  
Make yourself as visible as possible. Use a headlight and a tail light. Wear light colored clothing. Reflective leg bands are very effective.

USE HAND SIGNALS

Hand signals tell motorists what you intend to do. Signal as a matter of law, as a courtesy, and for your protection.

- LEFT ARM** (Left turn signal)
- LEFT ARM** (Left turn signal)
- LEFT ARM** (Left turn signal)
- STOP SIGNAL** (Stop signal)
